

ZTFbh: Harvesting TDEs: First Crop

Suvi Gezari, UMd (coordinator), Matthew Graham, Caltech (deputy coordinator)

ZTFbh SWG Dinner @ Daisy Mint
March 19, 2018

Nadia Blagorodnova, Radboud
Tiara Hung, UCSC (former grad student)
Sara Frederick, UMd (current grad student)
Scott Anderson UW
Charlotte Ward, UMd (current grad student)
Shri Kulkarni, Caltech
Peter Nugent, LBNL
Tom Barlow, Caltech
Brad Cenko, GSFC
Sjoert van Velzen, UMd/NYU (postdoc)
Lin Yan, Caltech
Po-Chieh Yu, NCU
Zeljko Ivezić, UW
Robert Stein, DESY
David Shupe, Caltech/IPAC
Nathaniel Roth, UMd and GSFC
Daniel Stern, Caltech/JPL

ZTFbh: AGN and TDE SWG

What are we doing?

We are conducting a systematic study of extragalactic nuclear transients.

What are we interested in?

- variable active galactic nuclei
- changing-look quasars (CLAGN)
- tidal disruption events (TDEs)
- supermassive black holes (binary, recoiling, intermediate-mass)

What tools do we use?

PI: Mansi Kasliwal

ZTFbh: AGN and TDE SWG

Panchromatic follow-up programs:

SEDm (Partnership Access):

- spectroscopic follow-up of **blue** ($g-r < 0$) *nuclear* (distnr $< 0.5''$ of galaxy host) **bright** ($r < 19$ mag) transients
- expect 2 SEDm triggers per week, expect 6 bonafide TDEs per year

HST (PI: Brad Cenko) + DDTs

70 orbits of STIS UV spectroscopy of 5 UV-bright TDEs

XMM (PI: Suvi Gezari)

2x18 ks of XMM X-ray imaging for 6 TDEs discovered pre-peak

VLA (PI: Sjoert van Velzen), AMI (PI: Assaf Horesh)

32 hours of VLA radio follow-up of 7 TDEs

Gemini ToO (PI: Hung)

5 triggers, spectroscopy

Spitzer(PI: Lin Yan)

24 hours of Spitzer MIR follow-up

Part one: TDE search

WINTER
IS
COMING

Motivation

- Probe dormant massive black holes
 - Accretion/jet physics
 - Measure black hole mass (?)
-
- Rare: One a few dozen know, handful per survey
 - ZTF can find large and systematic sample
 - Our motto: “no candidate left behind”

Look for nuclear flares

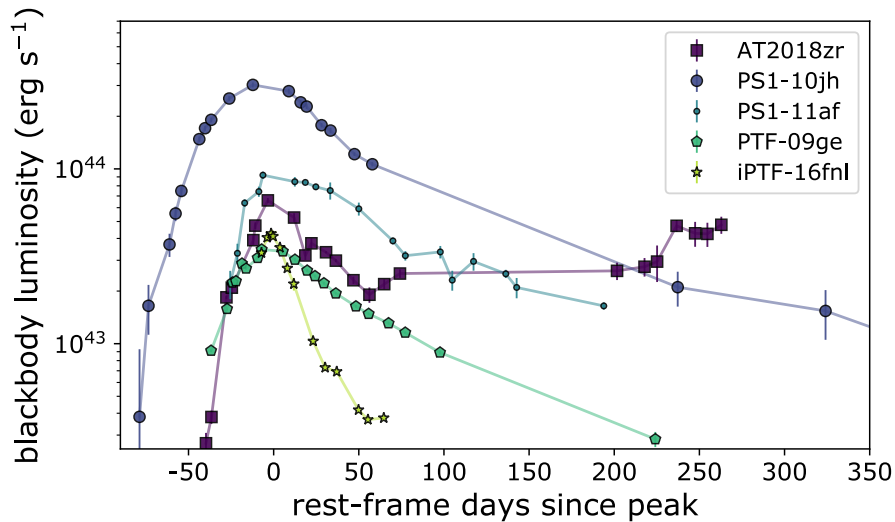

Look for nuclear flares

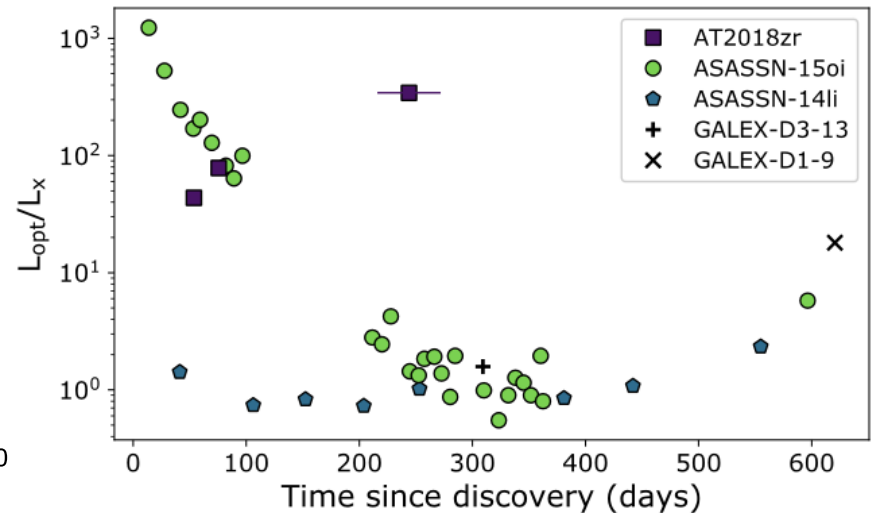

First TDE in ZTF: AT2018zr

TDE caught early on the rise to peak by ZTF

XMM Detected weak soft X-ray component

van Velzen, Gezari, et al. 2018

*AT2018zr is one of only 5 TDEs discovered **before** peak!*

AT2018zr is one of only 5 TDEs with an optical and X-ray detection!

Discovered by Pan-STARRS as PS18kh (Holoien et al. 2018)

Beware of SNe Ia (Joffries)

Blue Continuum + Broad **H** and/or **He II**

(No?) Broad **H** and/or **He II**

Host galaxies

Red Galaxy Hosts

Hung, Gezari+ 2018

Our current workflow

1. Filter stream for nuclear transients using **Ampel**
 - Select on weighted mean offset, flux increase, quality cuts
 - Includes *GaiaVeto*, to improve star-galaxy filtering (sgscore)
2. Autosave Marshal scan candidates (soon: auto-ingest)
3. Pull photometry from Marshal compute light curve metrics (eg, rise time, color, offset, flux increase)
4. Catalog cross matching (remove AGN)
5. Compute ranking based on metrics, produce summary plots
6. Manual allocations of follow-up resources based on ranking (discuss on Slack)

Part 2: Changing Look AGN

Challenge the classic
“AGN” Unification Scheme

“Tyrion Lannister” and a New Class of Changing Look LINERs

Frederick,
Gezari et al.
(in prep.)

A New Class of Changing-Look LINERS

6 new LINERS caught changing look into type 1 AGN by ZTF

Frederick, Gezari et al. (in prep.)

Part 3: SMBH Binaries and Recoil

Search for offset AGN-like Transients in

OFFSET FROM GALAXY NUCLEUS

van Velzen, Gezari+ 2018

+

known AGN or QSO-LIKE VARIABILITY

Ward, Gezari+, in prep.

What could be improved?

- Marshal photometry database: duplicates and “Update ZTF data” button

Light curve after saving
(Could be a TDE!)

After pressing update
(More likely AGN)

More discussion

- TDEs are slow: we prefer *old* reference images
- ZTF photometry of bright galaxy cores

ZTFbh: yield to date

Type	#	Everything	Recent data
AGN	1552	46%	65%
None	1192	36%	21%
Stellar	192	6%	7%
SNe Ia	129	4%	2%
SN (all types)	170	5%	3%
Bogus	47	1.4%	0.3%
CLAGN	6	0.2%	0.3%
TDE	8	0.2%	0.3%

2019 will be very fruitful!

LET'S GET LUNCH
