

TDE Meeting Notes 20210421

Scanning / Observing runs

Got 4 DBSP spectra for TDE candidates (3 SNe Ia, 1 SLSN-peculiar)

The false positive rate is a bit too high, we should make the box more constraining and only assign low priority to observing runs ($\leq P3$) for pre-peak candidates

XMM AO-20

Suvi: the program starts on May 1, lasts for one year. 6 triggers, each two spectral imaging separated by a few months.

Brad: UVOT/OM difference -- the XMM director is very cautious about changing filters on OM. Hard to get mutl-filter on XMM.

Remember to always put the "UVW1" filter (2600 A) on Swift.

Discussion on SRG Transients

Should help George to set up Fritz access, so that he knows all of our observing runs. Shri will take care of this.

Russian resources

<http://hea.iki.rssi.ru/AZT22/ENG/index.html>

Siberia telescope (latitude 53 degrees)

New Partners:

Marek Kowalski wants to join the TDE/AGN group.

He has a new PhD student Jannis Necker: search for neutrinos in TDEs.
